

This survey was conducted from October 26-28, 2022 and included a pool of 501 likely voters in Oklahoma. These survey results were weighted based on party affiliation, age, gender, and level of education based on Amber Integrated's proprietary 2022 voter turnout modeling. This survey has a margin of error of 4.4% at a 95% confidence interval. It is important to remember that subsets based on party affiliation, gender, age, education, race/ethnicity, and location carry with them higher margins of error, as the sample size is reduced. The poll surveyed both cell phones and landlines and used a combination of live callers and an online sample of likely voters.

This survey was conducted from October 26-28, 2022 and included a pool of 501 likely voters in Oklahoma. These survey results were weighted based on party affiliation, age, gender, and level of education based on Amber Integrated's proprietary 2022 voter turnout modeling. This survey has a margin of error of 4.4% at a 95% confidence interval. It is important to remember that subsets based on party affiliation, gender, age, education, race/ethnicity, and location carry with them higher margins of error, as the sample size is reduced. The poll surveyed both cell phones and landlines and used a combination of live callers and an online sample of likely voters.

This survey was conducted from October 26-28, 2022 and included a pool of 501 likely voters in Oklahoma. These survey results were weighted based on party affiliation, age, gender, and level of education based on Amber Integrated's proprietary 2022 voter turnout modeling. This survey has a margin of error of 4.4% at a 95% confidence interval. It is important to remember that subsets based on party affiliation, gender, age, education, race/ethnicity, and location carry with them higher margins of error, as the sample size is reduced. The poll surveyed both cell phones and landlines and used a combination of live callers and an online sample of likely voters.

This survey was conducted from October 26-28, 2022 and included a pool of 501 likely voters in Oklahoma. These survey results were weighted based on party affiliation, age, gender, and level of education based on Amber Integrated's proprietary 2022 voter turnout modeling. This survey has a margin of error of 4.4% at a 95% confidence interval. It is important to remember that subsets based on party affiliation, gender, age, education, race/ethnicity, and location carry with them higher margins of error, as the sample size is reduced. The poll surveyed both cell phones and landlines and used a combination of live callers and an online sample of likely voters.

This survey was conducted from October 26-28, 2022 and included a pool of 501 likely voters in Oklahoma. These survey results were weighted based on party affiliation, age, gender, and level of education based on Amber Integrated's proprietary 2022 voter turnout modeling. This survey has a margin of error of 4.4% at a 95% confidence interval. It is important to remember that subsets based on party affiliation, gender, age, education, race/ethnicity, and location carry with them higher margins of error, as the sample size is reduced. The poll surveyed both cell phones and landlines and used a combination of live callers and an online sample of likely voters.

This survey was conducted from October 26-28, 2022 and included a pool of 501 likely voters in Oklahoma. These survey results were weighted based on party affiliation, age, gender, and level of education based on Amber Integrated's proprietary 2022 voter turnout modeling. This survey has a margin of error of 4.4% at a 95% confidence interval. It is important to remember that subsets based on party affiliation, gender, age, education, race/ethnicity, and location carry with them higher margins of error, as the sample size is reduced. The poll surveyed both cell phones and landlines and used a combination of live callers and an online sample of likely voters.

Okay, now moving off the topic of this November General Election. In March of 2023, Oklahomans will vote in a statewide special election. State Question 820 would legalize recreational use of Marijuana for persons 21 and over, and may be amended by the legislature. The Oklahoma tax commission will collect a 15% excise tax on recreational sales above applicable sales taxes. Surplus tax revenues will fund public school programs, the general revenue fund, drug addiction treatment programs, courts, and local governments. The law will also require resentencing, reversing, modifying and expunging certain prior marijuana-related judgements and sentences unless the state proves an unreasonable risk to a person. If that special election were held today, how would you vote on the measure?
