Key Findings

The US economy has been showing signs of a “soft landing” in recent months, with inflation slowing amid employment growth. A closely divided House elected a new Speaker and passed a budget for federal government spending through early 2024. The Israel– Hamas war is weighing heavily on many Californians’ hearts and minds. California’s role in global affairs was front and center when Governor Newsom participated in high-level meetings on climate policy in China and world leaders gathered in San Francisco for the Asia-Pacific Economic Cooperation summit. The March 5 primary gained further clarity when Senator Dianne Feinstein’s replacement—Laphonza Butler—decided not to enter the primary, and four legislative measures were moved to the November ballot, making Proposition 1 the only measure on the March ballot.

This is the 25th year of the PPIC Statewide Survey. These are the key findings of the *Californians and Their Government* survey on state and national issues conducted from November 9 to 16, 2023:

- **Two in three likely voters would vote yes on Proposition 1, which includes the Behavioral Health Bond and Services Act.** Democratic congressmembers Adam Schiff and Katie Porter continue to lead in the top-two US Senate primary race. More than half of Republican likely voters say they will vote for former President Donald Trump in the presidential primary. President Joe Biden leads Donald Trump by 24 points in a potential November rematch; overall Democratic House candidates are favored over Republicans by a similarly large margin. About half of likely voters say they are “less enthusiastic” than usual about voting in the November election.

Two in three California likely voters say they would vote yes on Prop 1

- **Six in ten Californians name economic conditions, homelessness, and housing as the three most important issues facing the people of California today.** Partisans agree that economic conditions are the most important state issue. Majorities of adults and likely voters continue to approve of Governor Gavin Newsom, while fewer than half approve of the state legislature. A majority think the state is going in the wrong direction. Partisans are divided on the state’s direction and approval of state elected leaders.
- **Nearly two in three Californians believe the state will have bad times financially during the next 12 months, including majorities across the state’s major regions.** However, 46 percent expect the economy in their local area—and 54 percent expect their personal finances—will be about the same six months from now. Strong majorities say they are less comfortable making a major purchase and making other household purchases compared to six months ago.
- **A solid majority continues to view homelessness as a big problem in their part of California.** Most are concerned about the presence of homeless people in their local community and see someone who is experiencing homelessness on a frequent basis. About two in ten say they have frequently interacted with homeless people or that they or someone in their close family has experienced homelessness or housing insecurity. Overwhelming majorities say that substance abuse (78%) and lack of affordable housing (70%) are major factors in homelessness in their local community. Majorities across parties favor policies to help people experiencing homelessness.

➤ **Overwhelming majorities across the state’s major regions view housing affordability as a big problem in their part of California.** About half say the cost of housing is a financial strain, and about half of lower-income adults and renters report that the cost of housing causes “a lot” of financial strain. Majorities of Californians across partisan and demographic groups and regions say the state needs more policies geared toward making both homebuying and rental housing more accessible.

Californians name jobs, economy, and inflation, homelessness, and housing as the top state issues

➤ **Ninety-one percent of Californians have heard news about Israeli-Palestinian violence.** Thirty-seven percent of adults and 48 percent of likely voters think that the US has a responsibility to “do something” about the fighting between Israel and Hamas. Twenty-eight percent of adults say the US should take Israel’s side and 9 percent say the US should take the Palestinians’ side, while 61 percent say that the US should not take either side. Twenty-nine percent think the US is providing “too much” support to Ukraine—up from 13 percent in May 2022. Forty-six percent of adults and 58 percent of likely voters think that Congress should authorize additional funding to support Ukraine in its war with Russia.

➤ **About half of adults and a majority of likely voters approve of President Joe Biden.** About two in ten approve of Congress, with partisans in agreement. About half of adults and a majority of likely voters approve of Senator Alex Padilla. Forty-four percent of adults and half of likely voters have a favorable view of Senator Laphonza Butler. About three in ten adults and likely voters have a favorable opinion of Mike Johnson, the new Speaker of the House, including 15 percent of Democrats, 66 percent of independents, and 28 percent of Republicans.

2024 Election

California’s March 5 primary sets the stage for the November 5 general election, which includes the presidential race, a US Senate race, and House district races that will help determine which party controls the 119th Congress. Proposition 1, a legislative measure that includes the Behavioral Health Bond and Services Act, is also on the March ballot. Many experts are describing the 2024 elections as the most consequential in our lifetime. However, when asked about next November’s presidential election, 52 percent of likely voters say they are “less enthusiastic” about voting than usual. An identical share are “less enthusiastic” about voting in the November congressional elections. Today, only 20 percent are “very closely” following the news about the 2024 presidential candidates.

Here are the latest readings on the key races and Proposition 1 on the March 2024 ballot:

March Senate primary. Newly appointed US Senator Laphonza Butler recently announced that she would not be a candidate in the March Senate primary, and Republican Steve Garvey recently announced his late entry in the Senate race. Democratic congressmembers Adam Schiff (21%) and Katie Porter (16%) continue to lead in the top-two primary race, which will determine who will be on the November ballot. Steve Garvey (10%) and Congressmember Barbara Lee (8%) are in third and fourth place, while less than 5 percent support any other candidate and 14 percent are undecided (1% would vote for someone else not listed, 2% would not vote in the US senator race). Schiff and Porter were also frontrunners in the [July](#), [September](#), and [November](#) PPIC Statewide Surveys. Today, Schiff leads all other candidates in most demographic groups

and in every region except for Orange/San Diego (17% Schiff, 22% Porter). Notably, Porter leads Schiff among those under the age of 45 (23% to 11%), while Schiff leads Porter for those 45 and older (26% to 12%). Fifty-nine percent of likely voters and majorities across regions and demographic groups are satisfied with the choice of candidates, though there is a partisan divide (76% Democrats, 37% Republicans, 48% independents).

Democratic candidates Adam Schiff and Katie Porter lead in the top-two US Senate primary race

SOURCE: PPIC Statewide Survey, December 2023. Survey was fielded from November 9–16, 2023 (n=1,660 adults, n=1,113 likely voters).

NOTES: *Other candidates includes the “someone else (specify)” response option and any candidates below the top four. Among likely voters only.

Republican presidential primary. The majority of Republican primary likely voters say they would vote for former president Donald Trump (56%) in the presidential primary. Trump’s support had been at around 50 percent earlier this year (50% June, 50% July, 48% September, 53% November). Today, the closest competitors are former South Carolina governor Nikki Haley, at 13 percent, and Florida governor Ron DeSantis, at 12 percent. Support for other candidates—including Chris Christie (5%)—is under 10 percent, and just 1 percent say they don’t know who they will vote for (3% someone else, 1% would not vote in Republican primary). Trump’s support is at 61 percent among conservatives. While fewer than half of college graduates support Trump (43%), he also leads DeSantis (19%), Haley (28%), and Christie (6%) among this group.

A majority of Republican likely voters would vote for Donald Trump if the Republican presidential primary were held today

Top 4 candidates

SOURCE: PPIC Statewide Survey, December 2023. Survey was fielded from November 9–16, 2023 (n=1,660 adults, n=1,113 likely voters).

NOTES:*Other candidates includes the “someone else (specify)” response option and any candidates below the top four. Among Republican likely voters only.

Presidential election. Given a November 2024 presidential election between Joe Biden and Donald Trump, California likely voters would choose Biden by a wide margin (54% to 30%). The large margin of support is similar to the PPIC Surveys in June (58% Biden, 25% Trump), July (57% Biden, 31% Trump), September (57% Biden, 26% Trump), and November (60% Biden, 29% Trump). These findings are consistent with Biden’s margin of victory in the [2020 California election](#) (63.5% Biden, 34.3% Trump). Today, there is a wide partisan divide: 85 percent of Democrats would vote for Biden, 80 percent of Republicans support Trump, and independents would vote for Biden by almost a two-to-one margin (42% Biden, 23% Trump). Majorities of likely voters across age, gender, and income groups say they would vote for Biden, while support for Biden varies across regions (63% San Francisco Bay Area, 60% Los Angeles, 50% Central Valley, 46% Orange/San Diego, 40% Inland Empire). Biden has strong support among college graduates (63% Biden, 22% Trump) and those with some college education (51% Biden, 31% Trump), while those with high school or less education are divided (41% Biden, 43% Trump). As there was in surveys earlier this year, there is some interest in a third choice. Today, 9 percent say they would vote for “someone else” for president; shares with this view vary widely among partisans (4% Democrats, 6% Republicans, 22% independents), while shares are similar across demographic groups and across regions.

Joe Biden continues to lead over Donald Trump by a wide margin

SOURCE: PPIC Statewide Survey, December 2023. Survey was fielded from November 9–16, 2023 (n=1,660 adults, n=1,113 likely voters).

NOTES: Among likely voters only.

House district races. Will the lopsided top-of-the-ticket presidential race and the likelihood of two Democrats appearing on the Senate ballot in November help Democratic candidates win House seats? And will the intra-party conflict and dysfunction in the House this year have a negative impact on support for Republican candidates? If the 2024 election for the US House of Representatives were held today, 62 percent of likely voters say they would vote for or lean toward the Democratic candidate, while 37 percent would vote for or lean toward the Republican candidate. Majorities across most of the state’s major regions and across demographic groups would vote for the Democratic candidate. Residents in the Inland Empire are more divided, about half (51%) would vote for the Republican candidate. Importantly, 91 percent of Republicans and 95 percent of Democrats would vote for their party’s House candidate, while independents lean toward the Democrat by a 16-point margin (56% to 40%).

Proposition 1. Sixty-eight percent of likely voters say they would vote yes and 30 percent would vote no after reading a brief description of Proposition 1, which includes the legislature’s Behavioral Health Bond and Services Act (the ballot label and title were not made public in time for this survey). Majorities across demographic groups and across regions say they would vote yes, while partisans are divided (85% Democrats, 40% Republicans, 66% independents). We asked two follow-up questions on the Behavioral Health Bond and Services Act. Fifty-one percent of likely voters say it is a “good time” (46% “bad time”) to issue \$6.38 billion in bonds to fund housing for homeless individuals and veterans with mental health or substance abuse disorders. Shares viewing this as a “good time” vary across political groups (68% Democrats, 24% Republicans, 47% independents) and across income levels (64% less than \$40,000; 54% \$40,000 to \$79,999; 46% \$80,000 or more). When asked about the Mental Health Services Act—enacted by voters in 2004 to fund county mental health services with revenue from a 1 percent tax of income above \$1 million—64 percent say that changes are needed (30% major, 34% minor). Majorities across partisan and demographic groups and across regions think that changes are needed. Thirty-three percent believe that the Mental Health Services Act is “fine the way it is.”

A solid majority of California likely voters would vote for the Democratic candidate if the 2024 election for the House of Representatives were held today

Among likely voters

	Republican candidate/Lean Republican	Democratic candidate/Lean Democratic	Don't know

NOTES: Among likely voters only.

State of the State and Approval Ratings

When asked to name the most important issue facing the people of California today, Californians most often say jobs, the economy, and inflation (31%). Fewer mention housing costs and affordability (15%), homelessness (14%), crime (8%), and environmental issues (6%). Notably, the economy has been the top issue mentioned by Californians dating back to [May 2022](#).

About four in ten Californians think things in the state are going in the right direction, while nearly six in ten say things are headed in the wrong direction. A majority have said things are going in the wrong direction since [June](#). Today, nine in ten Republicans (90%) and about two in three independents (68%) say things are

going in the wrong direction, compared to just one in three Democrats (32%). Half or more across regions are pessimistic; negative views are most prevalent in the Inland Empire (68%), followed by the Central Valley (62%), Orange/San Diego (58%), Los Angeles (54%), and the San Francisco Bay Area (50%). Across racial/ethnic groups, six in ten Latinos and whites (60% each) say things are going in the wrong direction, while fewer than half of African Americans and Asian Americans (46% each) hold this view. Majorities across age and income groups think things are going in the wrong direction.

A majority of Californians continue to think things in the state are going in the wrong direction

SOURCE: PPIC Statewide Surveys, 1999–2023.

A majority of Californians (52%) continue to approve of the job that Gavin Newsom is doing as governor. Approval was similar last October (54%), and a majority has approved of Governor Newsom since January 2020. Fewer than half of Californians (45%) approve of the job that the California Legislature is doing. Approval was similar last October (49%); it has ranged from 45 percent to 56 percent since January 2020.

A majority approve of Governor Newsom, while less than half approve of the state legislature

% approve

SOURCE: PPIC Statewide Surveys, 1999–2023.

While a majority across most demographic groups approve of the job Governor Newsom is doing, there are partisan and regional divides. More than three in four Democrats approve, while nearly nine in ten Republicans disapprove. Independents are more likely to disapprove than approve. Across regions, majorities approve in the San Francisco Bay Area and Los Angeles, compared to fewer than half elsewhere. African Americans are much more likely than other racial/ethnic groups to approve of the governor's job performance, and approval is stronger among those with a college degree compared to those with less education.

Fewer than half of Californians approve of the way that the California Legislature is handling its job. Democrats, San Francisco Bay Area residents, African Americans, and college graduates are the only groups in which there is majority approval.

Approval of state elected leaders varies demographically and regionally

% approval

	Governor Newsom	California Legislature
All adults	52%	45%
Likely voters	52	47
Democrats	77	69
Republicans	12	11
Independents	46	36

Inland Empire	41	36
Los Angeles	55	49
Orange/San Diego	48	40
SF Bay Area	62	54
Men	52	45
Women	52	45
African Americans	67	52
Asian Americans	54	48
Latinos	54	46
Whites	47	42
Less than \$40,000	54	45
\$40,000 to \$79,999	51	45
\$80,000 or more	52	45

SOURCE: PPIC Statewide Survey, December 2023. Survey was fielded from November 9–16, 2023 (n=1,660 adults, n=1,113 likely voters).

Economic Conditions

About two in three Californians say they expect bad economic times in the next year, while just one in three expects good times. About two in three or more have expected bad times since July 2022. The share expecting bad times is lower among Democrats (47%) compared to independents (71%) and Republicans (87%). Pessimistic views are widespread across regions; they are most prevalent in the Inland Empire (78%) and least prevalent in Los Angeles (59%). The share expecting bad times is slightly lower among those 55 and older (61%), college graduates (60%), and those with incomes over \$80,000 (61%).

Most Californians expect bad economic times in the next year

SOURCE: PPIC Statewide Surveys, 1999–2023.

A plurality of Californians expect the economy in their local area to be about the same six months from now, while four in ten expect it to be weaker and about one in ten say it will be stronger. Views were nearly identical in September—the first time we asked this question. Pessimism about the local economy is slightly higher in the Inland Empire and Central Valley than elsewhere in the state. While differences across demographic groups are minimal, there is a wide partisan divide: six in ten Republicans (60%) are pessimistic, compared to nearly half of independents (47%) and one in four Democrats (24%).

Close to half of Californians think their local economy will be about the same six months from now

SOURCE: PPIC Statewide Survey, December 2023. Survey was fielded from November 9–16, 2023 (n=1,660 adults, n=1,113 likely voters).

Californians have rosier views of their personal financial situations. A majority say they think their financial state will be about the same (54%) in six months, while one in four say it will be weaker (18% somewhat

weaker, 7% much weaker), and one in five say their finances will be stronger (4% much stronger, 16% somewhat stronger). Perceptions were nearly identical in September. The share expecting their personal financial situation to be weaker is nearly twice as high among Republicans (35%) than Democrats (18%), while three in ten independents (31%) hold this view. San Francisco Bay Area residents (11% somewhat weaker, 6% much weaker) are less likely to be pessimistic than those in Los Angeles (18% somewhat weaker, 7% much weaker), the Inland Empire (16% somewhat weaker, 11% much weaker), the Central Valley (20% somewhat weaker, 8% much weaker), and Orange/San Diego (22% somewhat weaker, 7% much weaker). Financial pessimism declines with rising income and educational attainment.

When asked how they feel about making purchases today compared to six months ago, most Californians say they are less comfortable. About three in four Californians (74%) say they are less comfortable making a major purchase, like a home or car, while roughly two in three (66%) say they are less comfortable about making other household purchases. In September, views were nearly identical: 75 percent were less comfortable making major purchases while 65 percent were less comfortable about other household purchases.

While solid majorities across parties are less comfortable about making a major purchase, Republicans and independents are much more likely than Democrats to hold this view. Across regions, residents in the Inland Empire (82%) are the most likely to say they feel less comfortable, while those in Orange/San Diego (65%) are the least likely to feel this way. The share saying they are less comfortable is mostly similar across racial/ethnic, age, and gender groups, although college graduates and those making \$80,000 or more are slightly less likely than others to hold this view.

Similar patterns emerge when it comes to making other household purchases. Democrats are less likely than independents and Republicans to say they are less comfortable. Residents in the Inland Empire are most likely—and those in Orange/San Diego are least likely—to hold this view. Latinos and African Americans are somewhat more likely than Asian Americans and whites to say they are less comfortable making other household purchases. The share expressing this view declines sharply with rising educational attainment and is more common among those with incomes of less than \$40,000 compared to others.

A majority expect their personal financial situation to be the same in six months; most are less comfortable making purchases compared to six months ago

	Expects personal financial situation to be about the same	Less comfortable making major purchases	Less comfortable making other household purchases
All adults	54%	74%	66%

SOURCE: PPIC Statewide Survey, December 2023. Survey was fielded from November 9–16, 2023 (n=1,660 adults, n=1,113 likely voters).

Homelessness

Nearly all Californians say homelessness is at least somewhat of a problem in their part of the state; 64 percent say it is a big problem (32% somewhat of a problem, 4% not a problem). The share saying this is a big problem is somewhat similar to [February](#) (70%), and at least six in ten have said this since [May 2019](#), the first time PPIC asked this question. Today, majorities across partisan, demographic, and regional groups hold this view.

Eighty-six percent of California adults say that they are very (45%) or somewhat (41%) concerned about the presence of homeless people in their local communities. A similar share said they were very concerned last March (46%), though this share has been declining since November 2019 (58%). Today, four in ten or more among partisan, racial/ethnic, gender, age, income, and educational groups say they are very concerned. Across regions, Los Angeles residents (50%) are most likely to say they are very concerned, while Orange/San Diego residents (37%) are least likely to say this.

When asked about potential factors contributing to homelessness in their communities, about eight in ten adults and likely voters say that substance abuse is a major factor, about seven in ten say the lack of affordable housing is a major factor, and six in ten or more say the lack of mental health services or loss or reduced income is a major factor. Majorities of Republicans, Democrats, and independents agree that substance abuse and the lack of affordable housing are major factors. However, when it comes to a lack of mental health services and loss of income, about half of Republicans say this compared to majorities of Democrats and independents. Majorities across demographic groups and regions say these are all major factors.

Most Californians say that a number of major factors are contributing to homelessness in their local communities

% saying major factor

SOURCE: PPIC Statewide Survey, December 2023. Survey was fielded from November 9–16, 2023 (n=1,660 adults, n=1,113 likely voters).

Asked about policy ideas to help homeless people in California, 78 percent of adults and likely voters each support providing short-term financial support for homeless families (oppose: 21% adults and likely voters each), with the support of solid majorities among Democrats, Republicans, and independents.

Overwhelming majorities across race/ethnicity, gender, age, education, income, and regions say they support this.

Overwhelming majorities of adults and likely voters (77% each) also support converting empty office spaces in cities into affordable housing (oppose: 22% each adults and likely voters). Majorities of Republicans, Democrats, and independents support this policy as well, and more than seven in ten across demographic and regional groups say this.

More than three in four adults (77%) and likely voters (76%) say they support building developments of tiny or small homes across the state (oppose: 22% adults, 24% likely voters); majorities across parties and overwhelming majorities across demographic groups and regions express support.

Majorities across parties favor policies to help people experiencing homelessness in California

% support

SOURCE: PPIC Statewide Survey, December 2023. Survey was fielded from November 9–16, 2023 (n=1,660 adults, n=1,113 likely voters).

About two in ten Californians (21%) say they or someone in their close family has experienced housing insecurity or homelessness, including 10 percent who say they themselves experienced this (11% say another person in their family had this experience). About eight in ten (79%) say this has not happened to them or a family member. African Americans are about twice as likely or more than any other racial/ethnic group to say they or a family member have had this experience—also, African Americans (26%) are far more likely than any other racial/ethnic group to say they personally have had this experience (11% Latinos, 9% whites, 2% Asian Americans). Across regions, Central Valley residents are the most likely to say they or a family member have experienced homelessness, and residents in the San Francisco Bay Area are the least likely to say this. The shares saying this decline as income and education rises. Women are somewhat more likely than men, and renters are about twice as likely as homeowners to say this.

More than seven in ten Californians say they see someone experiencing homelessness daily (53%) or every few days (19%), while one in seven (or fewer) say they see a homeless person weekly (14%) or rarely (11%), and 3 percent say they have never had this experience. About half or more across parties say they see a person experiencing homelessness daily. Across racial/ethnic groups, majorities of African Americans, Latinos, and whites say this, compared to 32 percent of Asian Americans. The shares who say they see a homeless person daily decline as education and income increase. Majorities of residents in Los Angeles, the Central Valley, and the Inland Empire say this, compared to fewer in other regions.

Far fewer say they have interacted with someone experiencing homelessness. Two in ten residents say they have interacted with someone who is homeless on a daily basis (9%) or every few days (10%); one in ten say

they have interactions weekly, while 45 percent say they seldom have interactions, and 26 percent say they never do. African Americans, those without a college degree, and those with incomes under \$40,000 are the most likely demographic groups to say they interact with a homeless person daily. Across regions, about one in ten residents in Los Angeles, the Central Valley, and Orange/San Diego say this, compared to somewhat fewer elsewhere.

Californians report varying levels of experience with homelessness

	They or someone in their close family have experienced housing insecurity or homelessness	They see someone experiencing homelessness daily or every few days	They interact with someone experiencing homelessness daily or every few days

SOURCE: PPIC Statewide Survey, December 2023. Survey was fielded from November 9–16, 2023 (n=1,660 adults, n=1,113 likely voters).

Housing Affordability and Accessibility

Nearly all Californians say that housing affordability is at least somewhat of a problem in their part of the state, and more than three in four say it is a big problem (77%; 20% somewhat of a problem). The share saying it is a big problem was somewhat similar in February (70%) and has been increasing since [March 2021](#) (61%). Today, three in four or more among partisan groups say housing affordability is a big problem. Overwhelming majorities across regions and across most demographic groups say this. Renters (83%) are more likely than homeowners (72%) to see affordability as a big problem.

Nearly all adults say housing affordability is a problem in California

SOURCE: PPIC Statewide Survey, December 2023. Survey was fielded from November 9–16, 2023 (n=1,660 adults, n=1,113 likely voters).

About half of Californians say that the cost of housing is a financial strain for them and their families, including one in three who say it places a lot of strain on them (34%; 17% yes, a little). The share saying the cost of housing places a lot of financial strain on them has increased somewhat since the last time PPIC asked this question via telephone survey in [May 2017](#), (27% yes, a lot; 18% yes, a little, 2% not sure how much). Today, independents (36%) and Republicans (33%) are more likely than Democrats (23%) to say housing places a lot of financial strain on them. Across racial/ethnic groups, Latinos and African Americans are most likely to hold this view, compared to fewer Asian Americans and whites. Residents in the Inland Empire are more likely than residents elsewhere to say that the cost of housing places a lot of financial strain on them. Adults with a high school education or less are far more likely than those with more education, and those earning less than \$40,000 are far more likely than those earning more to say this. Fifty-one percent of renters in the state say housing costs place a lot of financial strain on them, compared to far fewer homeowners (19%).

Half of Californians say the cost of housing places financial strain on them and their families

SOURCE: PPIC Statewide Survey, December 2023. Survey was fielded from November 9–16, 2023 (n=1,660 adults, n=1,113 likely voters).

Roughly three in four adults (54% a lot more, 22% some) and likely voters (45% a lot more, 24% some) say that California needs more policies geared toward making homebuying more accessible. While majorities across parties say more policies are needed, there is a partisan divide: a solid majority of Democrats and a slim majority of independents say a lot more are needed, compared to about three in ten Republicans. Majorities across demographic groups and regions say more needs to be done. Across racial/ethnic groups, strong majorities of Latinos (69%) and African Americans (67%) say a lot more needs to be done, compared to roughly four in ten Asian Americans (43%) and whites (42%). The share expressing this view declines with rising age, education, and income. Renters (68%) are far more likely than homeowners (42%) to say that a lot more policies geared toward making homeownership more accessible are needed.

About three in four adults (54% a lot more, 20% some) and likely voters (49% a lot more, 23% some) say that California needs more policies geared toward making rental housing more accessible. Majorities across partisan, demographic, and regional groups say this. Majorities of Democrats (61%) and independents (53%) say a lot more policies are needed, compared to 33 percent of Republicans. Across racial/ethnic groups, strong majorities of African Americans (73%) and Latinos (65%) say this, compared to fewer than half of whites (46%) and Asian Americans (44%). The share expressing this view declines with rising education, income, and age. Renters (68%) are far more likely than homeowners (42%) to say that a lot more policies geared toward making rental housing more accessible are needed.

About three in four Californians say the state needs more policies geared toward making homebuying and rental housing more accessible

The Nation's Role in International Conflicts

In late October, President Biden unveiled a \$106 billion proposal that primarily consisted of funding for Ukraine and Israel. The Russian invasion of Ukraine has been in the news for almost two years, while the Israel–Hamas war began in October. Ninety-one percent of Californians have heard news about the escalating violence in Israel and Palestine (59% a lot, 32% a little). Californians are divided on the role the US should play in the conflict between Hamas and Israel and how much support the US should give Ukraine.

When asked about the role of the US in the fighting between Israeli forces and Hamas, nearly equal shares of Californians say the US does (37%) and does not (36%) have a responsibility; just over a quarter say they are not sure (27%). However, nearly half of likely voters (48%) say the US has a responsibility. Nearly half (48%) of Democrats say the US has responsibility, compared to slightly fewer Republicans (42%) and independents (40%). Views are similar across most regions, apart from the Inland Empire, where only a quarter (24%) say the US has a responsibility in the Israel-Hamas fighting. Across age groups, only 35 percent of those under age 55 say the US has this responsibility, compared to 44 percent of adults 55 and older. The shares who hold this view increase with educational attainment and income, and are somewhat higher among men (41%) than women (34%).

In a nationwide [Economist/YouGov survey](#) conducted in November this year, a similar share of Americans overall (38%) say the US has a responsibility in the fighting between Israel and Hamas (37% does not have a responsibility).

Californians are split on whether the US has a responsibility in the fighting between Israeli forces and Hamas

SOURCE: PPIC Statewide Survey, December 2023. Survey was fielded from November 9–16, 2023 (n=1,660 adults, n=1,113 likely voters).

When asked about which side the US should take in the Israel–Palestine conflict, 61 percent of adults and 51 percent of likely voters say the US should not take a side. Twenty-eight percent of adults and 37 percent of likely voters say the US should take Israel’s side, while 9 percent of adults and 11 percent of likely voters say the US should take Palestine’s side. According to a national survey conducted in October by the [Wall Street Journal/Ipsos](#), about half (52%) of Americans say the US should not take a side in this conflict. About six in ten California Republicans say the US should take Israel’s side, compared to three in ten independents and one in five Democrats. Solid majorities of both Democrats and independents say the US should not take a side in the Israeli-Palestinian conflict, compared to 37 percent of Republicans.

Majorities across demographic groups and regions say the US should not take a side in the Israel-Palestine conflict. Among Californians ages 18 to 34, 21 percent say the US should take Palestine’s side and 17 percent say the US should take Israel’s side. Among adults 55 and older, 40 percent say the US should take Israel’s side and 4 percent say the US should take Palestine’s side. Across racial/ethnic groups, Latinos (17%), Asian Americans (23%), and African Americans (29%) are less likely than whites (38%) to say the US should take Israel’s side.

A majority of Californians say the US should not take a side in the Israel-Palestine conflict

SOURCE: PPIC Statewide Survey, December 2023. Survey was fielded from November 9–16, 2023 (n=1,660 adults, n=1,113 likely voters).

With the Russian invasion of Ukraine nearing the two-year mark, Californians are divided on whether Congress should authorize additional funding for Ukraine (50% should not, 46% should). A majority of likely voters lean toward authorizing additional funding (59% should, 39% should not). Partisans are divided: a solid majority of Democrats (64%) say Congress should authorize additional funding, compared to nearly half of independents (48%) and only a third of Republicans (32%).

Residents in the San Francisco Bay Area (53%) are much more likely to say Congress should authorize additional funding than residents in the Inland Empire (32%). Men (50%) are somewhat more likely than women (43%) to hold this view. Whites (54%) and Asian Americans (53%) are more likely than African Americans (37%) and Latinos (35%) to favor additional funding for Ukraine. The shares holding this view increase with increasing age, educational attainment, and income.

SOURCE: PPIC Statewide Survey, December 2023. Survey was fielded from November 9–16, 2023 (n=1,660 adults, n=1,113 likely voters).

When respondents were asked to assess the amount of support the US has provided to Ukraine during the invasion by Russia, over a third of adults say it has been the right amount, about three in ten say it has been too much (29%), and 16 percent say there has not been enough support; one in five say they are not sure. Shares are similar among likely voters (41% about the right amount, 25% too much, 16% too little). The shares of Californians who say there has been too much support is up significantly from [May 2022](#), when only 13 percent expressed that view.

Today, nearly half of Republicans say the US has given Ukraine too much support, while about two in ten Democrats and 32 percent of independents say the same. About a quarter of Democrats say the US has not given enough support to Ukraine. Residents in the Central Valley and the Inland Empire are more likely than

residents elsewhere to say the US has provided too much support. Still, between 30 and 40 percent across all regions say the US has given Ukraine about the right amount of support.

Among racial/ethnic groups, white Californians are most likely to say the US has not given enough support to Ukraine, while Latinos and African Americans are most likely to say the country has given too much support. Across education levels, college graduates (22%) are more likely than less-educated adults to say the US has not given enough support (14% some college, 12% high school only). Adults under 55 (34%) are more likely than those over 55 (21%) to say there has been too much support.

Federal Approval Ratings

October was a tumultuous month for the federal government, with the outbreak of war between Israel and Hamas and a three-week standstill in the House as Republicans struggled to elect a new Speaker. In the wake of this turmoil, Californians' approval of the branches of the federal government has declined.

Less than half (47%) of Californians approve of Joe Biden's handling of his job as president; a majority of likely voters approve (59%). Among all adults, this is his lowest approval rating since he took office in January 2021, when 70 percent of Californians expressed approval.

About one in five or fewer Californians (21% adults, 16% likely voters) approve of the job Congress is doing today. Approval of Congress was close to double last October (37% adults, 29% likely voters) just before the 2022 midterm elections, which shifted control of the House from the Democrats to the Republicans. Approval has declined from 27 percent in February, shortly after Republicans took control.

Less than half of Californians approve of Biden, and only about a fifth approve of Congress

% approve

SOURCE: PPIC Statewide Surveys, 2021–2023.

Partisans remain deeply divided on President Biden's job performance: 74 percent of Democrats, 41 percent of independents, and 12 percent of Republicans approve. Approval is highest among African Americans (62%), compared to half of Asian Americans and less than half of whites (45%) and Latinos (44%). Majorities approve of Biden in the San Francisco Bay Area (53%) and Los Angeles (51%), while residents in the Inland Empire are the least likely to approve (35%). On the national level, 37 percent approve, and 59 percent disapprove of President Biden, according to a recent Gallup poll.

Californians are also divided on Alex Padilla's handling of his job as a US senator (47% approve, 45% disapprove); a majority of likely voters approve (53%). Padilla's approval has held steady since he became a US senator in 2021. Today, approval of Alex Padilla across parties and demographic groups is similar to that of President Biden's. Democrats are far more likely than independents (44%) and Republicans (18%) to

approve. A majority of African Americans (58%) approve of Padilla, compared to less than half of Asian Americans (48%), whites (47%), and Latinos (46%).

Approval of the US Congress is very low: 21 percent of adults and 16 percent of likely voters approve of the way Congress is handling its job (disapprove: 75% adults, 83% likely voters). Overwhelming majorities across partisan groups disapprove of Congress (75% Democrats, 82% independents, 84% Republicans). Strong majorities across demographic groups disapprove of Congress. Residents in Los Angeles (29%) are more likely than residents in other regions to approve, while Latinos (30%) are more likely than other racial/ethnic groups to approve. Approval of the US Congress is slightly higher in California than in the nation overall (15% approve, 82% disapprove), according to a [recent Gallup poll](#).

Close to half approve of President Joe Biden and US Senator Alex Padilla, while about two in ten approve of the US Congress

% approval

SOURCE: PPIC Statewide Survey, December 2023. Survey was fielded from November 9–16, 2023 (n=1,660 adults, n=1,113 likely voters).

After the death of Diane Feinstein, Governor Newsom appointed Laphonza Butler to serve for the remainder of Feinstein's Senate term. More than four in ten Californians (44% adults, 50% likely voters) have a favorable opinion of Butler. A strong majority of Democrats have a favorable opinion of Senator Butler, compared to about four in ten independents and only 16 percent of Republicans.

Across regions, about half in the San Francisco Bay Area (52%) and Los Angeles (48%) have a favorable opinion of Senator Butler, compared to four in ten or less in other regions. Asian Americans are more likely than any other racial/ethnic group to hold a favorable view. College graduates (56%) are much more likely than those with some college education (42%) or those with a high school education or less (36%) to have a favorable opinion of Senator Butler.

On October 25, Mike Johnson, a Republican from Louisiana, was elected Speaker of the House of Representatives after the chamber had gone the greater part of a month without a leader. About three in ten Californians hold a favorable view of Johnson (31% adults and likely voters). Two in three Republicans have a favorable opinion of Speaker Johnson, compared to about three in ten independents and one in six Democrats. One in three Latinos and whites view him favorably, while fewer African Americans (26%) and Asian Americans (25%) hold this view. Residents in the San Francisco Bay Area (24%) and college graduates (23%) are the least likely to have a positive view of Johnson.

Less than half hold a favorable opinion of Senator Laphonza Butler; about a third have a positive view of House Speaker Mike Johnson

Regional Map

This map highlights the five geographic regions for which we present results; these regions account for approximately 90 percent of the state population. Residents of other geographic areas (in gray) are included in the results reported for all adults, registered voters, and likely voters, but sample sizes for these less-populous areas are not large enough to report separately.

Methodology

This is the 25th year of the PPIC Statewide Survey. Coauthors of this report include survey director Mark Baldassare, who holds the Miller Chair in Public Policy; associate survey director and research fellow Dean Bonner, and survey analysts Lauren Mora and Deja Thomas, who were co-project managers for this survey. The Californians and Their Government survey is supported with funding from the Arjay and Frances F. Miller Foundation and the James Irvine Foundation. The PPIC Statewide Survey invites input, comments, and

suggestions from policy and public opinion experts and from its own advisory committee, but survey methods, questions, and content are determined solely by PPIC's survey team.

Findings in this report are based on a survey of 1,660 California adult residents. The median time to complete the survey was 22 minutes. Interviews were conducted from November 9–16, 2023.

The survey was conducted by Ipsos, using its online KnowledgePanel, in English and Spanish according to respondents' preferences. KnowledgePanel members are recruited through probability-based sampling and include both those with internet access and those without. KnowledgePanel provides internet access for those who do not have it and, if needed, a device to access the internet when they join the panel. KnowledgePanel members are primarily recruited using address-based sampling (ABS) methodology, which improves population coverage, particularly for hard-to-reach populations such as young adults and minority groups. ABS-recruited Latinos are supplemented with a dual-frame random digit dialing (RDD) sampling methodology that targets telephone exchanges associated with areas with a higher concentration of Latinos to provide the capability to conduct representative online surveys with Latinos, including those who speak only Spanish. KnowledgePanel's recruitment was originally based on a national RDD frame and switched to the primarily ABS-based methodology in 2009. KnowledgePanel includes households with landlines and cell phones, including those with cellphones only and those without phones. ABS allows probability-based sampling of addresses from the US Postal Service's Delivery Sequence File (DSF). The DSF-based sampling frame used for address selection is enhanced with a series of refinements—such as the appendage of various ancillary data to each address from commercial and government data sources—to facilitate complex stratification plans. Taking advantage of such refinements, quarterly samples are selected using a stratified sampling methodology that aims to retain the representativeness of the panel. KnowledgePanel recruits new panel members throughout the year to offset panel attrition.

To qualify for the survey, a panel member must be age 18 or older and reside in California. A general population sample of Californians was selected using Ipsos's PPS (probability proportional to size) sampling procedure to select study-specific samples. Briefly, to select such samples, the panel is first weighted to population benchmarks and those panel weights are used as the measure of size for a PPS sample selection that yields a fully representative sample. A total of 1,703 respondents completed the survey out of 2,971 panelists who were sampled, for a response rate of 57 percent. To ensure the highest data quality, we flagged respondents who sped through the survey, which we defined as completing the survey in one-fourth of the overall median time (less than 5.5 minutes). We also flagged respondents if their self-reported age or gender did not match the data stored in their profile. A total of 43 cases were removed after this review process, resulting in 1,660 total qualified and valid cases.

Accent on Languages, Inc., translated new survey questions into Spanish, with assistance from Renatta DeFever.

Ipsos uses the US Census Bureau's 2017–2021 American Community Survey's (ACS) Public Use Microdata Series for California (with regional coding information from the University of Minnesota's Integrated Public Use Microdata Series for California) to compare certain demographic characteristics of the survey sample—region, age, gender, race/ethnicity, and education—with the characteristics of California's adult population. The survey sample was closely comparable to the ACS figures. We also used voter registration data from the California Secretary of State to compare the party registration of registered voters in our sample to party registration statewide. The sample of Californians is first weighted using an initial sampling or base weight that corrects for any differences in the probability of selecting various segments of the KnowledgePanel sample. This base weight

is further adjusted using an iterative proportional fitting (raking) procedure that aligns sample demographics to population benchmarks from the 2017–2021 ACS data as well as party registration benchmarks from the California Secretary of State’s voter registration file.

The sampling error, taking design effects from weighting into consideration, is ± 3.2 percent at the 95 percent confidence level for the total unweighted sample of 1,660 adults. This means that 95 times out of 100, the results will be within 3.2 percentage points of what they would be if all adults in California were interviewed. The sampling error for unweighted subgroups is larger: for the 1,410 registered voters, the sampling error is ± 3.4 percent; for the 1,113 likely voters, it is ± 3.8 percent. Sampling error is only one type of error to which surveys are subject. Results may also be affected by factors such as question wording, question order, and survey timing.

We present results for five geographic regions, accounting for approximately 90 percent of the state population. “Central Valley” includes Butte, Colusa, El Dorado, Fresno, Glenn, Kern, Kings, Madera, Merced, Placer, Sacramento, San Joaquin, Shasta, Stanislaus, Sutter, Tehama, Tulare, Yolo, and Yuba Counties. “San Francisco Bay Area” includes Alameda, Contra Costa, Marin, Napa, San Francisco, San Mateo, Santa Clara, Solano, and Sonoma Counties. “Los Angeles” refers to Los Angeles County, “Inland Empire” refers to Riverside and San Bernardino Counties, and “Orange/San Diego” refers to Orange and San Diego Counties. Residents of other geographic areas are included in the results reported for all adults, registered voters, and likely voters, but sample sizes for these less-populous areas are not large enough to report separately.

We present results for non-Hispanic whites, who account for 40 percent of the state’s adult population, and also for Latinos, who account for 36 percent of the state’s adult population and constitute one of the fastest-growing voter groups. We also present results for non-Hispanic Asian Americans, who make up about 16 percent of the state’s adult population, and non-Hispanic African Americans, who comprise about 5 percent. Results for other racial/ethnic groups—such as Native Americans—are included in the results reported for all adults, registered voters, and likely voters, but sample sizes are not large enough for separate analysis. Results for African American and Asian American likely voters are combined with those of other racial/ethnic groups because sample sizes for African American and Asian American likely voters are too small for separate analysis. We compare the opinions of those who report they are registered Democrats, registered Republicans, and decline-to-state or independent voters; the results for those who say they are registered to vote in other parties are not large enough for separate analysis. We also analyze the responses of likely voters—so designated per their responses to survey questions about voter registration, previous election participation, intentions to vote this year, attention to election news, and current interest in politics.

Sample sizes and margins of error for each subgroup are presented in the table below.

The percentages presented in the report tables and in the questionnaire may not add to 100 due to rounding.

We compare current PPIC Statewide Survey results to those in our earlier surveys and national surveys conducted by Gallup, Ipsos, Pew Research Center, YouGov, and The Economist. Numerous questions were adapted from the national surveys by the Pew Research Center, YouGov, and Kaiser Family Foundation. Additional details about our methodology can be found at www.ppic.org/wp-content/uploads/SurveyMethodology.pdf and are available upon request through surveys@ppic.org.

8% not at all closely
– don't know

Next, we have a few questions about Proposition 1 on the March ballot.

13. [likely voters only] Proposition 1 is the behavioral health services program and bond measure. It renames the Mental Health Services Act of 2004 to the Behavioral Health Services Act, and expands its purpose and funding to include substance abuse disorders and housing intervention programs. It authorizes \$6.38 billion in state general obligation bonds to fund housing for homeless individuals and veterans with mental health or substance abuse disorders. If the election were today, would you vote yes or no on Proposition 1?

68% yes
30% no
2% don't know

14. [likely voters only] Is this a good time or a bad time for the state to issue \$6.38 billion in bonds to fund housing for homeless individuals and veterans with mental health or substance disorders?

51% good time
46% bad time
3% don't know

15. [likely voters only] The Mental Health Services Act enacted by voters as Proposition 63 in 2004 funds county mental health services with revenue from a 1 percent tax on income above \$1 million. Do you think that this act is in need of major changes, minor changes, or that it is basically fine the way that it is?

30% major changes
34% minor changes
33% fine the way it is
3% don't know

Next, changes were made to the referendum process, which enables voters to approve or reject a new law, when the state legislature passed Assembly Bill 421 and the governor approved it in September. Please indicate if you favor or oppose these changes to the referendum process.

[rotate questions 16 to 18]

16. [likely voters only] Do you favor or oppose having a period of time in which the referendum sponsor and the legislature can meet to see if there is a compromise solution before referendums go to the ballot?

78% favor
18% oppose
3% don't know

17. [likely voters only] Do you favor or oppose replacing “yes” and “no” with “Keep the law” and “Overturn the law” for statewide referendum measures?

73% favor
24% oppose

– don't know

[d1–d18 demographic questions]

Authors

Mark Baldassare is the Statewide Survey Director at the Public Policy Institute of California, where he holds the Arjay and Frances Fearing Miller Chair in Public Policy. He is a leading expert on public opinion and survey methodology and has directed the PPIC Statewide Survey since 1998. He is an authority on elections, voter behavior, and political and fiscal reform, and the author of ten books and numerous publications. Previously, he served as PPIC's president and CEO, director of research, and senior fellow. Before joining PPIC, he was a professor of urban and regional planning in the School of Social Ecology at the University of California, Irvine, where he held the Johnson Chair in Civic Governance. He has conducted surveys for the *Los Angeles Times*, the *San Francisco Chronicle*, and the California Business Roundtable. He holds a PhD in sociology from the University of California, Berkeley.

Dean Bonner is associate survey director and research fellow at PPIC, where he coauthors the PPIC Statewide Survey—a large-scale public opinion project designed to develop an in-depth profile of the social, economic, and political attitudes at work in California elections and policymaking. He has expertise in public opinion and survey research, political attitudes and participation, and voting behavior. Before joining PPIC, he taught political science at Tulane University and was a research associate at the University of New Orleans Survey Research Center. He holds a PhD and MA in political science from the University of New Orleans.

Lauren Mora is a survey analyst at the Public Policy Institute of California, where she works with the statewide survey team. Prior to joining PPIC, she was a research assistant with the race and ethnicity team at the Pew Research Center, where she played a key role in quantitative and qualitative studies on Latino and Asian Americans. She holds a BA in geography/environmental studies from the University of California, Los Angeles.

Deja Thomas is a survey analyst at the Public Policy Institute of California, where she works with the statewide survey team. Prior to joining PPIC, she was a research assistant with the social and demographic trends team at

the Pew Research Center. In that role, she contributed to a variety of national quantitative and qualitative survey studies. She holds a BA in psychology from the University of Hawai'i at Mānoa.
